# Vampire<sup>®</sup> FLUID SAMPLING PUMPS

## The right tool . . .

Easy Vac, Inc. manufactures and markets "Vampire" fluid sampling pumps . . . small, hand-operated vacuum pumps which have brought a new level of performance to fluid sampling. Their durability, simplicity, versatility and ease of operation give them a distinct advantage over competitive models. Originally developed for oil sampling, "VAMPIRES" have proven to be useful in a variety of applications. Companies such as environmental cleanup, trucking, phone, mass transit systems, labs and utilities have all found the VAMPIRE Pumps to be invaluable tools. The X-Models feature distinctive yellow heads made of lightweight, injection-molded nylon and the U-Models are fitted with clear, cast acrylic heads. Both are equipped with all aluminum parts to make great looking, durable pumps. Any model may be equipped with a vacuum release valve.

"VAMPIRE" Pumps draw a vacuum in excess of 27 inches of Hg (Mercury). The patented tube coupling device accepts any size sampling tube (with an outside dimension of 3/16" through 5/16") without changing fittings. **The sampling tube is inserted through the coupling device until the lower end extends below the top of the sample bottle.** When the knurled knob is turned to tighten the seal, the vacuum will draw fluid directly into the bottle without coming into contact with the pump. **This patented feature allows multiple samples to be taken without cleaning the pumps between samples.**

## FLUID SAMPLING PUMPS

Easy Vac, Inc. makes pumps that fit the threads of many different size bottles. If the model (size) is not known, send us your container and we will determine the correct size. Pumps that accommodate 1/2" tubing (38-U1/2) are available for sampling heavy gear oils. We will also quote on custom built pumps for size or private label.

## SAMPLING CONTAINERS

Easy Vac, Inc. stocks HDPE polyethylene bottles in sizes of 2, 3, 4, 8, 16 & 32 ounces and also PET 4 ounce clear bottles. All have thread size (38mm) and fit any VAMPIRE pump with a beginning model designation of 38-. All containers are designed especially for use with VAMPIRE Pumps and are guaranteed not to collapse. Black plastic mailers are available for 2, 3 or 4 oz. bottles.

## TUBING

The following sizes of polyethylene tubing are available from stock in 100' lengths. Outside diameters are—3/16", 1/4", and 5/16" and 1/2". This tubing is produced especially for drawing fluid samples. Like the bottles, the tubing will not collapse under vacuum. Custom cut lengths are also available.

## CUSTOM PACKED SAMPLING KITS

By special order, a combination of tubing, bottles and pumps can be custom packed to meet your requirements. This can also include proprietary markings and supplementary literature.

## AVAILABLE

ISO 4406 "Super Clean" Bottles  
Filter Funnels  
Filter Disc
